DLT Technology

The Blockchain

Blockchain is one of the next disruptive technologies. Distributed Ledgers Technologies are the basement of a large series of new frameworks like big data, artificial intelligence, internet of things.

Main characteristics of the DLT's are the algorithms of validation, the mechanisms of voting and the storing of encrypted data through chains, DAG or merkle trees.

The basically aspect offered by the DLT consist in its adaptability. In fact, the diffusion of the blockchain will be progressively adopted or a lot of different uses. Chain of chains as base infrastructure of other applications.

The Web 3.0

The security of browsers and commercial activities on the Internet, which is called web 1.0, represents the first phase of recent use of the internet; the web 2.0, more current, sees the growth of social network sites and the birth of a participatory culture on the web, which distinguishes the web 2.0.

The 3.0 web represents the phase that is currently experiencing, defined by a series of possible paths that we are going to elaborate later on.

Web 3.0 is the best sphere where DLT's technologies will take place implementing the web database, the artificial intelligence, the semantic web, geospatial web.

The Smart Contracts

The smart contract is a computer protocol by which it is possible to execute and write command lines and can also be used as legal contracts.

The use of smart contracts began in 1970, but it is the DLT's protocols integration that signed the difference and opened to a real revolutionary future.

Smart contracts can automate the execution of a list of conditions matching them with a virtual machine, that contain the rule set. Through a smart contract it is possible to define the methods which regulate the actions and the events that the users invoke. If the requests of the user can't match the rule set, the smart contract won't validate the transaction, otherwise the smart contract allows it.

The Cryptography

Cryptography is an essential part of the security. Data encryption helps to ensure the protection against the attempt of data leaks and cover the contents of the documents.

Encryption is also a fundamental part of the hashing process, especially on blockchains where each transaction or block is chained to the previous and consequent one by a hash.

For every kind of encryption, Pepeeta offer the newest and strong release. Constant updating of the algorithm to the latest version and cutting edge technology even for Keys, AES or hash.

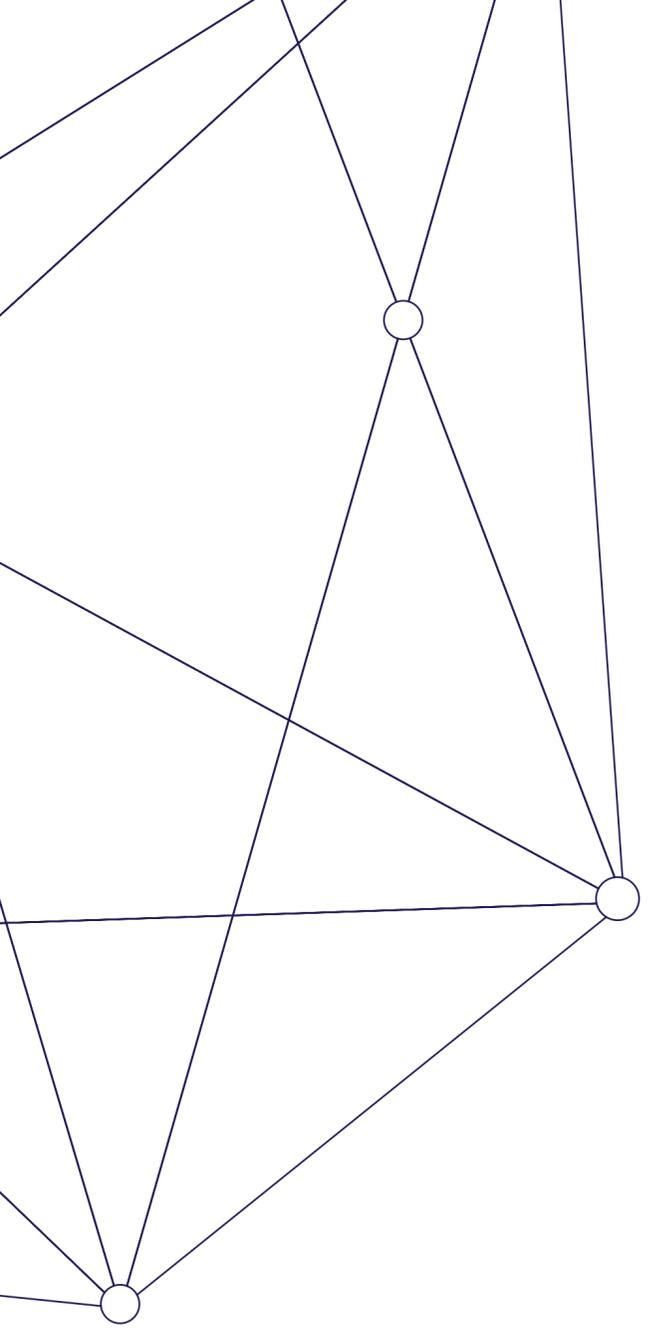

The Distributed Databases

Databases are the places where data is stored. Currently they fastly go through a deep change. Build strong databases is mandatory to store and manage the information correctly and securely.

The use of databases widely growth during last years, and the type also was changed. Databases was modified from relational to non relational to give a response to the necessities of the big data, machine learning and artificial intelligence issues.

Blockchain implement the database too. In fact, the approach with distributed ledger technologies is to create a distributed storage of the hash sharing and updating them with all the nodes. Studies are oriented to make distributed also the storages of massive data.

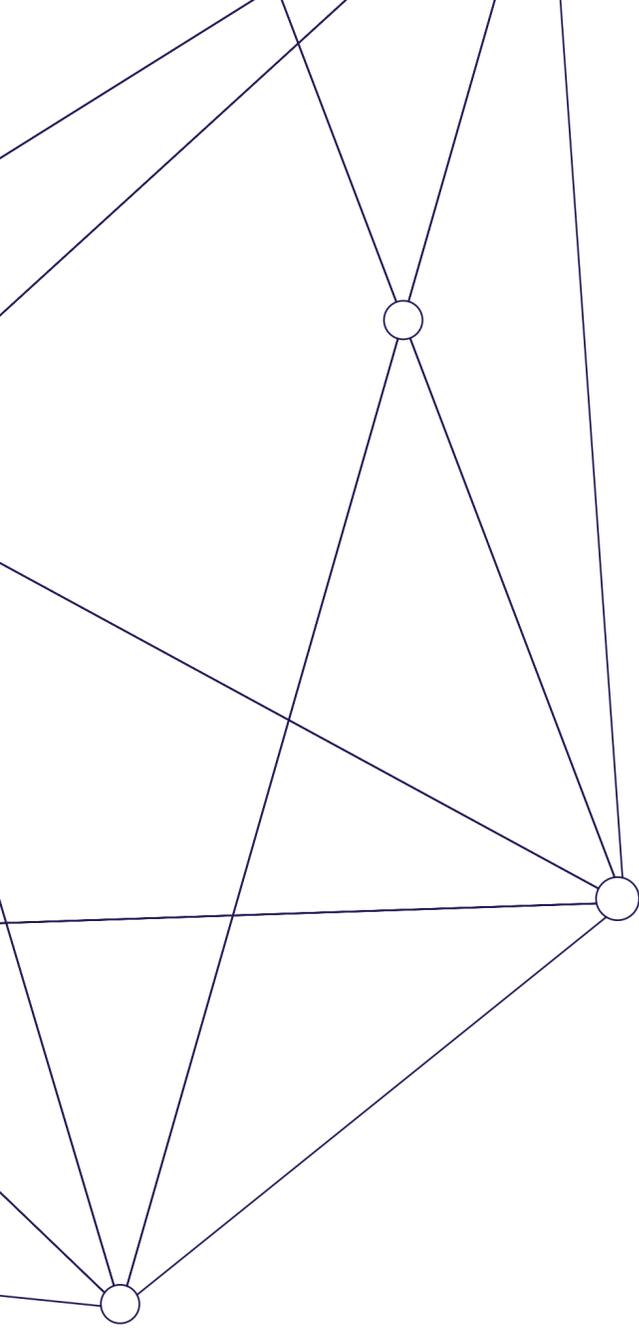

The Smart Economy

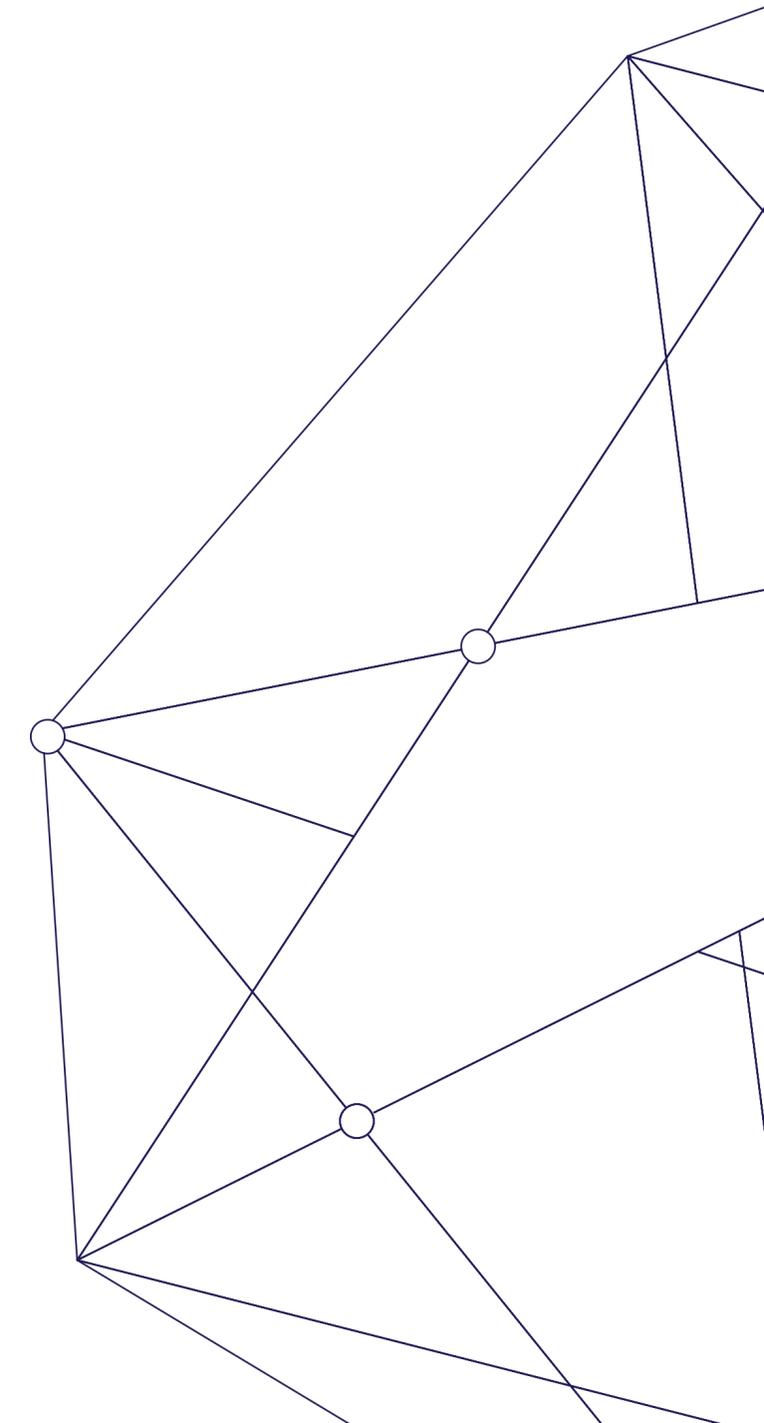

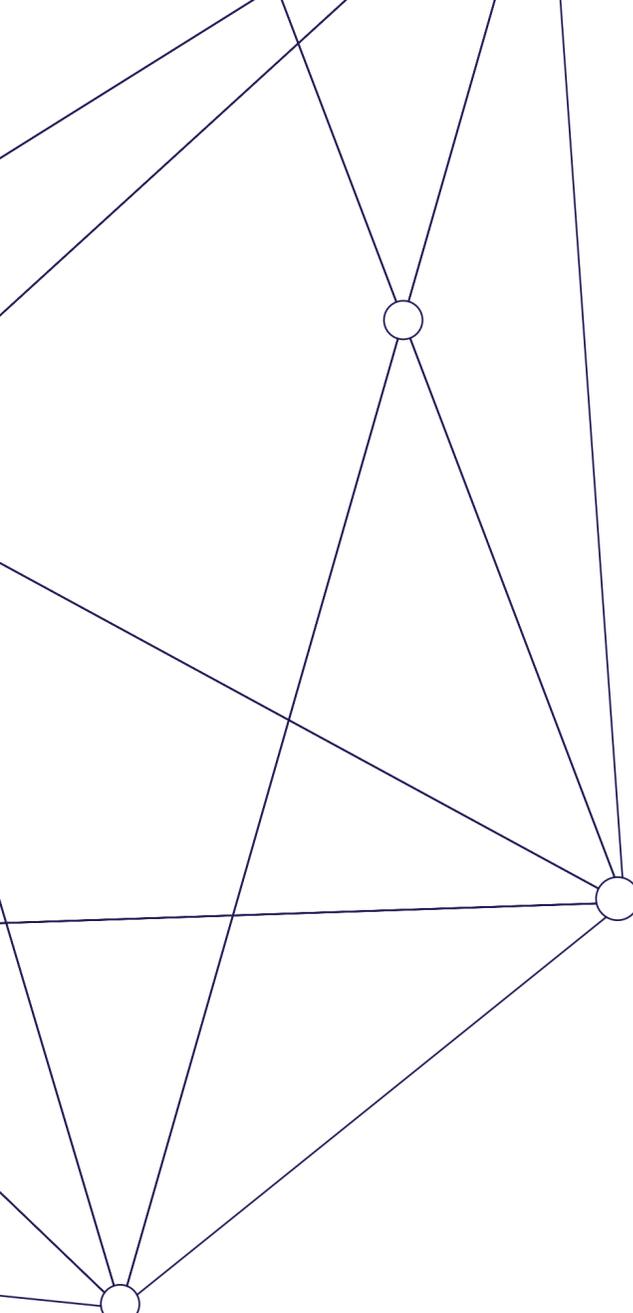

Smart Economy is the next generation of economy and trade where trade agreements are written in programming code using Smart Contracts. Every Smart Contract is stored in a decentralized immutable blockchain and will be executed exactly according to the trading agreement, at the time agreed upon. This allows for an economy where two or even thousands of parties can agree on a contract without the need to trust each other. The Smart Contract is going to be always executed according to the defined rules in the contract.

The evolution of technology through Smart Contracts points to a complete digital transformation, where the data interacts autonomously and automatically with objects, people or other softwares. Everything that has a value, could be transformed into a digital asset, that can be everytime exchanged by buyers and sellers, and currencies will be handled peer-to-peer without the need for third party exchanges.

Pepeeta

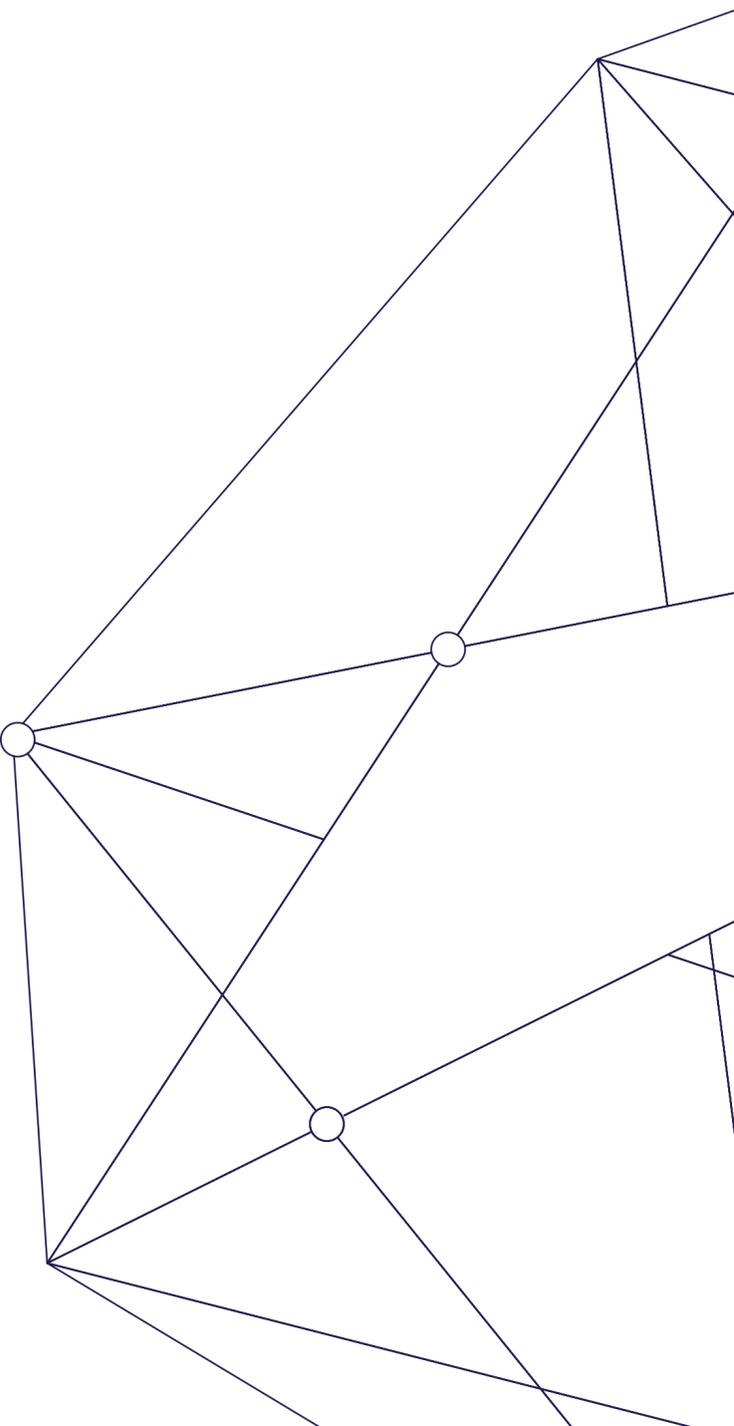

What is Pepeeta

Pepeeta is a **distributed platform** designed for Smart Economy. The architectural stack has been developed through the NEO protocol to offer users a series of dApps able to facilitate business, making it safe and compliant with current and upcoming regulations on GDPR, PSD, e-Invoicing.

Pepeeta is a platform that, as an environment, allow other parties to join the platform with the possibility of editing and build new dApps or connect to the existing ones.

Pepeeta features **four native dApps**.

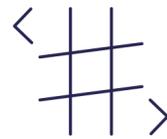

Pepeeta dApps

PepeetaStamp

an hashstamp for any of your document.

PepeetaLog

a powerful checksum for system log audit.

PepeetaInvoice

for Agile's e-invoicing and a automatic payements.

PepeetaSafe

for code review and security report.

PEPEETA
STAMP

PepeetaStamp features:

- Certain time (timestamp) on documents.
- Insertion of the SHA3 Hash of the document in blockchain with digital signature.
- Return of QR Code to label the sheets put in chain.
- Recovery from the document hash window.
- Distributed archiving with AES256 encryption and accessible only by key given to the user.

PepeetaLog features:

- Receiving log lines to be audited.
- Read the lines and enclose them in blocks in the chain.
- Apply SHA3 hashing algorithm to encrypt logs.

PEPEETA
INVOICE

PepeetaInvoice features:

- It allows access to shared cms.
- It allows to construct the contract between the parts transforming it into smartcontract.
- It allows to define the acceptance criteria for the “Done”.
- Guarantees payment in credits (in the budget view) and through third parties provides for the deposit of the amount.
- Proceeds to assign the fee to each “Done”.
- Manage safeguard mechanisms (events that may depend on malfunctions).

PepeetaSafe features:

- Read the written code of a sw and review the code.
- Online data reading, generation of SHA3 hash and store in chain.
- Returns a report with risk analysis with digital signature in glyph.

Pepeeta act as DAO

DAO means decentralized autonomous organization. Pepeeta facilitates the creation, the building and the developing of the necessary smart contracts.

We strongly welcome and encourage the participation to our environment even through the population of already existing dApps or the creation of new ones from zero.

Every new idea will be hosted everytime , Pepeeta will act as incubator for new projects, or as strategic partner for existing business structures. We organize meetups, DevCon and many other initiatives which align the research&develop with the business integration.

For everyone.

Why Pepeeta

PEPEETA

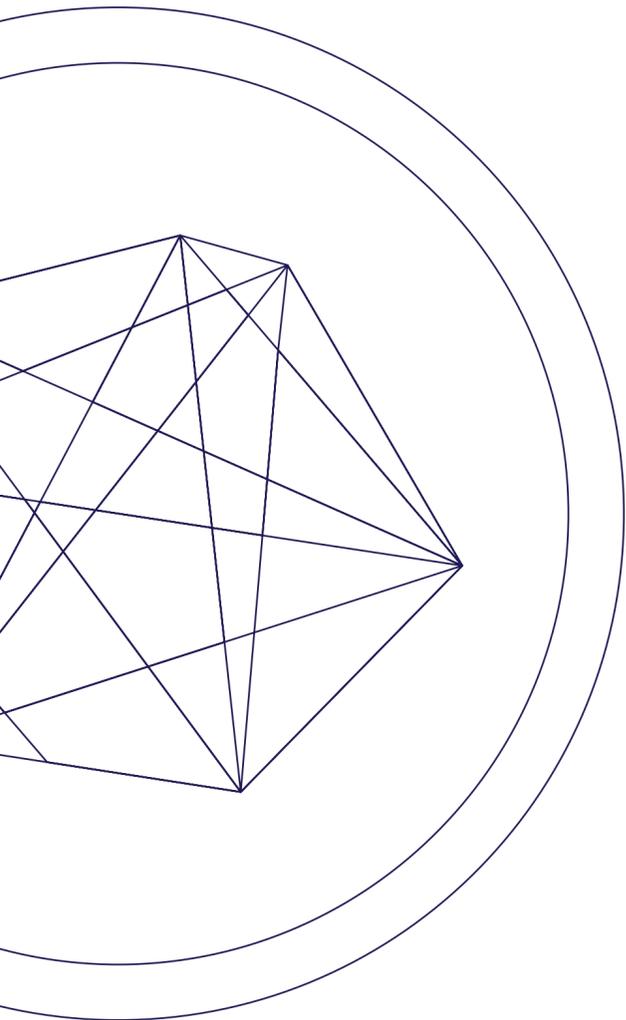

- means less bureaucracy and more business.
- means innovation .
- is the platform that takes you into the world of blockchain.
- is a token that offers you great advantages.
- is a constantly evolving project.
- is working in Agile mode.
- is to reset the costs of the middleman.
- is complete security.
- is avant-garde.
- is DAO.
- empower your business.

Roadmap

- from next 27/11 [the website <https://www.pepeeta.com> will be online.
- from next 01/12* [to 01/03/2019
the **Private ITO** phase will be active.
- from next 01/12 [the website <https://www.pepeeta.io> will be online.
- from 15/01/2019 [the **platform** can be installed through the plugin
from the website <https://www.pepeeta.com>
- from 04/03/2019* [until Token is sold out or until **31/12/2019**,
the **Public ITO** phase will be active.
- in the Q1 2019 [the dApps **PepeetaStamp** and **PepeetaLog** will be **released**.
- in the Q2 2019 [the dApps **PepeetaInvoice** and **PepeetaSafe** will be **developed**.
- in the Q3 2019 [the dApp **PepeetaInvoice** will be **released**.
- in the Q4 2019 [the dApp **PepeetaSafe** will be **released**.

*date to be confirmed

Pepeeta Token

Pepeeta generates a Token. The nature of the token, is going to be an utility token. The token will be released on the Ethereum Classic blockchain and is going to follow the standard **ERC20**.

The adoption of the token will generates a discount in the prices of credits, that is the necessary fuel to use dApps.

The token's smart contract has been audited and strongly tested before its release. It establish that will be release 10 million of PEP token in two phases: In the Private Sale that is the first phase, 1,5 million tokens are going to be released with a discount of 50%, and than in the Open Sale the discount will be of 30% for the remaining ones.

Pepeeta use cases

Pepeeta is designed to be adopted both as a web platform, or as a part of entire existing architecture.

We already applied Pepeeta's features for Vitrociset SPA. We built a specific blockchain configuration of its enterprise content management (ECM) system.

Many other prospect are going to proceed and we welcome anyone who wants to be part of the new era of smart economy.

Pepeeta will be your best blockchain partner.

PEPEETA What's Why How White Paper Team Use Case Blog FAQ

What's Pepeeta

Pepeeta is a distributed platform designed for Smart Economy. The architectural stack has been developed through the NED protocol to offer users a series of dApps able to facilitate business, making it safe and compliant with current and upcoming regulations on GDPR, PSD, e-Invoicing.

PEPEETA What's Why How White Paper Team Use Case Blog FAQ

How Pepeeta

Pepeeta operates entirely in-cloud. Its dApps will be usable exclusively through the PepeetaGas token. Pepeeta takes you to an innovative dimension where speed, privacy, security and certainty are the main focus.

PEPEETA What's Why How White Paper Team Use Case Blog FAQ

Why Pepeeta

Pepeeta is strong, stable and scalable. It allows you to save time and money, having legal certainty of operations performance, to work Agile® with your suppliers reducing the bureaucracy burden, to give you the maximum security in terms of confidentiality and cyber security. All our Smart contracts are audited.

The Environment

Pepeeta environment is designed on two different layers:

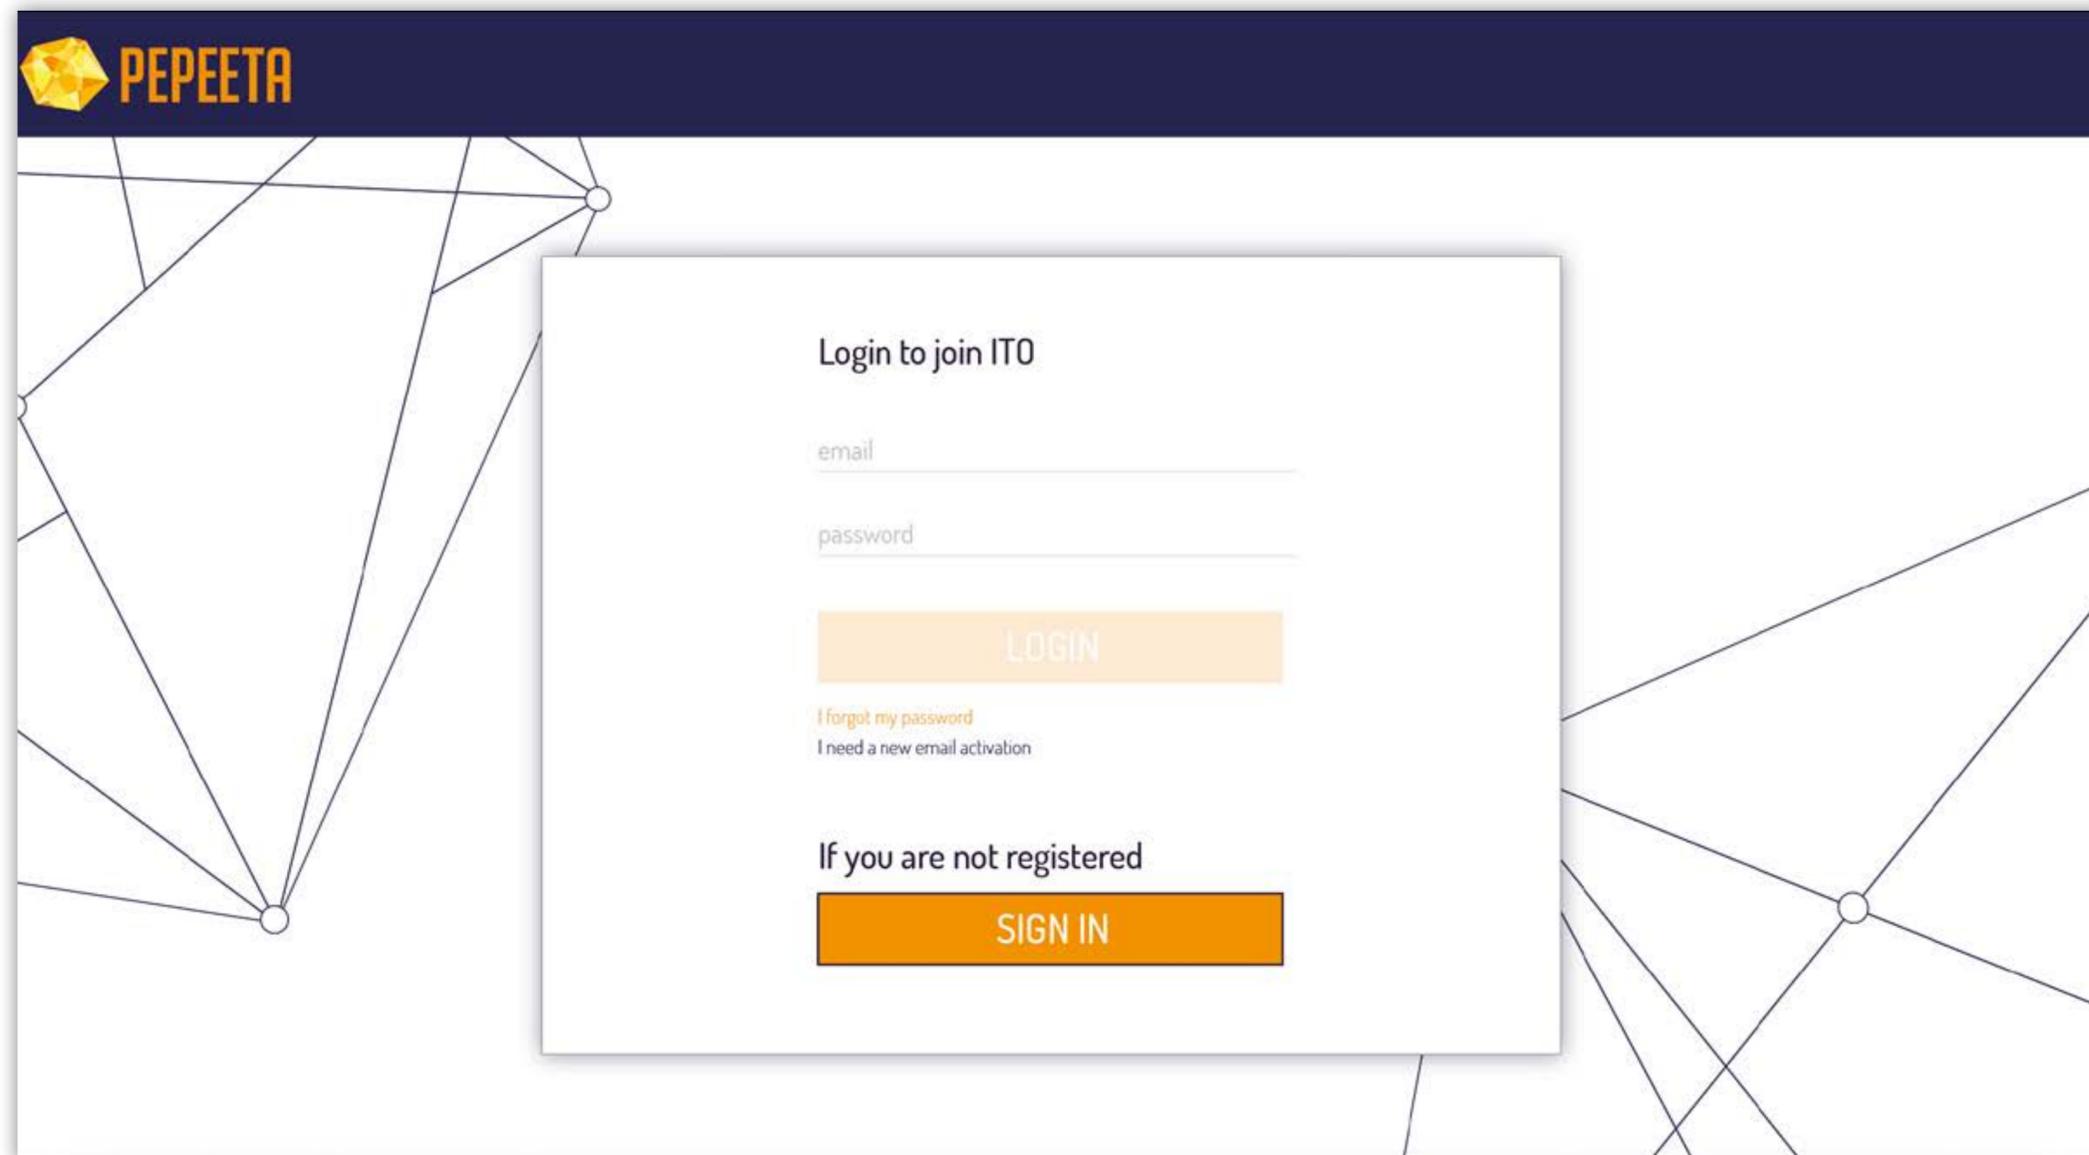

- a top layer where are placed the dApp - decentralized web application - who runs on the blockchain distributed protocol. Everyone could use the dApp's via web through the smart contract logic and the token system,
- an underlying level where there is the space. Into that space, where Pepeeta operates like DAO, is possible to develop, edit or connect your own dApp;
- a middleware layer, called Celani - dedicated to our loved colleague Marco Celani who too early leaved this world - that is a power orchestrator of different services. This layer is not visible for the user and is both stable and permanent.

Is easy to reach Pepeeta, because is only necessary to install the plug-in - a web browser extension - to be registered in and create an account. After the welcome page, the client shows a dashboard, where you can access to:

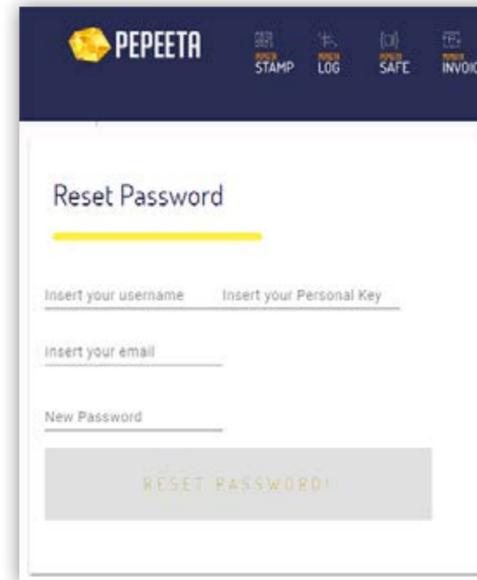

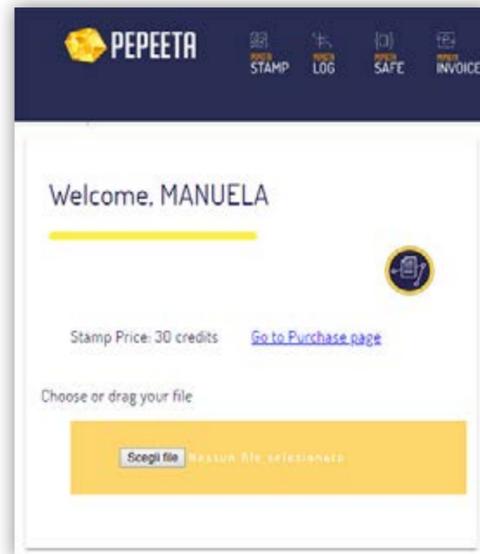

1. Multwallet Dynamic Manager, where is possible to manage any of your external wallet and monitoring your balance;
2. Chart and KPI's, where are represented all the information showed as key process indicators and trend charts;
3. Chain Ledger, where is possible to know in real time the chain status, the transactions and all the blocks created.

On top of the window, you can select the four dApps and browse as you need. To create, build or connect your own dApp, is necessary to link to the apposite contact form, or following or instruction on our GitHub page.

Preview of Pepeeta Website

A screenshot of the Pepeeta website's login page. The page has a dark blue header with the Pepeeta logo. The main content area is white and features a central login form. The form is titled "Login to join ITO" and contains two input fields: "email" and "password". Below the input fields is an orange "LOGIN" button. Underneath the button are two links: "I forgot my password" and "I need a new email activation". At the bottom of the form, there is a section titled "If you are not registered" with an orange "SIGN IN" button. The background of the page is white with a faint, light blue geometric pattern of lines and circles.

Plugin in progress

Start-up Highlights

Year of foundation: 2018

Place of foundation: Italy-Malta

Where it currently operates: Worldwide

Employees: 10 to be scaled

Principal investors:

Digital Engineering (incubator),
Primedata (shareholder),
Carlo Parmegiani (shareholder)
Luca Pedetti (shareholder)
and others privates incoming.

Founders: Carlo Parmegiani, Luca Pedetti.

Founders

Carlo Parmegiani - Co Founder

Luca Pedetti - Co Founder

After several years in which Luca has projected his idea of using dlt's he met Carlo who own Digital Engineerig and has beleaved in him. They have watched their mutual trust grow up and both decided to put their effort to a disruptive program. After that, the perfect mix have been found and Pepeeta become true.
